PART B: MULTI-TIMEFRAME WORKFLOW

PART C: ENTRY CONDITIONS & VALIDATION

PART D: INSTRUMENT ADAPTABILITY

PART E: STANDARDIZED EXECUTION FRAMEWORK

PART F: SCREENSHOT INTERPRETATION

PART G: COMPLETE ANALYSIS WORKFLOW

PART H: DECISION RULES

PART I: DEMONSTRATION & VALIDATION

PART J: MASTER PROMPT

PART A: FOUNDATIONAL DEFINITIONS

A1.. ECCENTRIC LIQUIDATION: OPERATIONAL DEFINITION

Eccentric Liquidation (EL) is a PRICE-ACTION EVENT characterized by:

1. UNUSUAL PRICE EXCURSION: A rapid, non-linear movement that exceeds the instrument's typical volatility envelope by >= 1.6x the 20-period ATR measured from the highest timeframe in analysis.

2. LIQUIDITY RAID EVIDENCE: The excursion sweeps a clearly defined liquidity pool (stop cluster) identified by:

- Previous swing high/low with visible wicks
- Order block from prior displacement
- Fair Value Gap (FVG) from imbalance
- Volume spike (when available)

3. REJECTION OR RECLAIM: Price returns >= 61.8% of the excursion distance within 3 candles (timeframe-dependent) OR reclaims the pre-excursion structure level with momentum.

4. DISPLACEMENT CONFIRMATION: The rejection creates a new market structure shift (higher high/low or lower high/low) within 5 candles of the eccentric event.

5. MSS/BOS ALIGNMENT: The event occurs at or beyond a Market Structure Shift (MSS) or Break of Structure (BOS) level from the next higher timeframe.

OPERATIONAL FORMULA:

EL = (Excursion > 1.6x ATR20) AND (Liquidity Sweep) AND (Rejection >= 61.8%) AND (Structure Shift) AND (MSS/BOS Alignment)

EXCLUSIONS (Not EL):

- News-driven gaps without liquidity context
- Regular retracements within established trends
- Range expansions without structural follow-through
- Low-volume spikes in illiquid pairs
- Pre-planned economic event reactions

A2.. RELATIONSHIP TO ESTABLISHED SMC/ICT CONCEPTS

ESTABLISHED CONCEPTS (SMC/ICT):

- Liquidity: Areas where stop orders cluster (above highs, below lows)
- Market Structure: Series of higher highs/lows (bullish) or lower highs/lows (bearish)
- Break of Structure (BOS): Price moves beyond previous swing extreme
- Change of Character (CHOCH): Price behavior shifts from trend to range or vice versa
- Fair Value Gap (FVG): Three-candle imbalance creating unfilled liquidity
- Order Block: Institutional order clusters from prior displacement
- Mitigation Block: Counter-trend orders from FVG fills
- Discount/Premium: Price relative to fair value
- Kill Zone: High-probability reversal areas (London Open, New York Open)

NEW HYPOTHESES (ELM-SPECIFIC):

- Eccentric Liquidation: The specific pattern defined above
- 1.6x ATR Threshold: Quantified excursion boundary
- 61.8% Rejection Rule: Fibonacci-based validation
- Multi-Timeframe MSS Alignment: Cross-timeframe confirmation requirement
- Volatility-Scaled Parameters: Dynamic adaptation system

SEPARATION PROTOCOL:

When analyzing any price action:

1. First classify using ESTABLISHED SMC/ICT concepts
2. Then check if NEW ELM hypotheses apply
3. Never force ELM interpretation on standard patterns
4. Document which framework each observation belongs to

A3.. MARKET PHENOMENA CLASSIFICATION

PHENOMENON | SMC/ICT TERM | ELM CLASSIFICATION | TRADABLE?

---|---|---|---

Sharp reversal | Liquidity Raid | Potential EL | Yes (with confirmation)

Stop hunt | Liquidity Sweep | EL Component | Yes

Breakout | BOS | Not EL (continuation)| Yes (different rules)

False breakout | FVG Fill | EL Candidate | Yes

Range expansion | - | Not EL | No

News spike | - | Excluded | No

Trend continuation | - | Not EL | Yes (different rules)

A4.. HYPOTHESIS SEPARATION PROTOCOL

RULE 1: Every observation must be classifiable under SMC/ICT BEFORE applying

ELM hypotheses.

RULE 2: ELM hypotheses only apply when ALL FIVE criteria from A1 are met.

RULE 3: If a pattern fits SMC/ICT but not ELM, trade using SMC/ICT rules.

RULE 4: If a pattern fits both, prioritize ELM only if it offers superior

reward-to-risk based on backtested performance.

RULE 5: Document the classification path for every analysis.

B1.. INSTRUMENT & TIMEFRAME DISCOVERY

AUTOMATIC IDENTIFICATION PROTOCOL:

From uploaded screenshot, extract:

1. Instrument: From chart title or symbol display

- Forex: XXXYYY format (EURUSD, GBPJPY, etc.)

- Metals: XAUUSD, XAGUSD

- Synthetics: Volatility75, Volatility100, etc.

2. Timeframe: From chart period label

- Standard: M1, M5, M15, M30, H1, H4, D1, W1, MN

- Custom: Any non-standard (flag for manual review)

3. Chart State: Current candle status

- OPEN: Current candle still forming

- CLOSED: All candles complete

DISCOVERY COMMANDS:

- "IDENTIFY INSTRUMENT": Extract symbol from screenshot

- "IDENTIFY TIMEFRAME": Extract period from screenshot

- "LIST ALL": Show all identified instruments and timeframes

B2.. TOP-DOWN ANALYSIS PROTOCOL

STEP 1: Highest Timeframe (HTF) Analysis

a. Identify market structure (trend/range)

b. Map major liquidity levels (above highs, below lows)

c. Note MSS/BOS points from prior swings

d. Establish volatility baseline (ATR20)

e. Define fair value zone (middle 50% of recent range)

STEP 2: Intermediate Timeframe (ITF) Analysis

a. Confirm HTF structure alignment

b. Identify internal liquidity pools

c. Look for FVGs and order blocks

d. Check for eccentric events meeting HTF criteria

e. Validate rejection quality

STEP 3: Execution Timeframe (ETF) Analysis

a. Pinpoint exact entry triggers

b. Define stop-loss placement

c. Calculate TP levels

d. Verify all EL criteria

e. Check for conflicting signals

TIMEFRAME PRIORITY:

- If D1 present: D1 -> H4 -> H1

- If H4 present but not D1: H4 -> H1 -> M15

- If H1 present but not H4/D1: H1 -> M15 -> M5

- If M15 present but not higher: M15 -> M5 -> M1

CONTEXT RETAINED:

- HTF liquidity levels

- HTF structure direction

- HTF volatility envelope

- HTF MSS/BOS status

B3.. CONTEXT RETENTION SYSTEM

MEMORY HIERARCHY:

1. Instrument Profile (persists across all timeframes)

- Average daily range

- Typical spread

- Quote precision

- Volatility classification (Low/Medium/High)

2. Session Context (resets daily)

- London Open level

- New York Open level

- Asian session range

- Kill zone status

3. Timeframe Context (cascades downward)

- Structure direction

- Liquidity levels

- ATR values

- FVG locations

CONTEXT PROPAGATION:

When moving from HTF to ITF to ETF:

- HTF liquidity levels become ITF "external liquidity"
- HTF structure becomes ITF "macro bias"
- HTF volatility becomes ITF "scaling factor"
- ITF observations become ETF "confirmation requirements"

B4.. TIMEFRAME COMBINATION MATRIX

APPROVED COMBINATIONS:

D1 -> H4 -> H1:

- Use for: Major pairs, high volatility
- Minimum candles: D1=30, H4=100, H1=400
- Best for: Swing trading (1-3 days)

H4 -> H1 -> M15:

- Use for: All pairs, medium volatility
- Minimum candles: H4=50, H1=200, M15=400
- Best for: Day trading (hours to 1 day)

H4 -> H1 -> M15 -> M5:

- Use for: Scalping, precise entries
- Minimum candles: H4=50, H1=200, M15=400, M5=800
- Best for: Intraday (minutes to hours)

M15 -> M5 -> M1:

- Use for: Fast-moving pairs, news events
- Minimum candles: M15=100, M5=400, M1=2000
- Best for: Micro-scalping (< 1 hour)

CUSTOM COMBINATIONS:

- Must maintain >= 4x ratio between timeframes
- Must have >= 100 candles on execution timeframe
- Must pass context validation check

C1.. BULLISH ECCENTRIC LIQUIDATION SETUP

REQUIREMENTS (ALL MUST BE MET):

1. EXCURSION BELOW STRUCTURE:

- Price sweeps below a clearly defined liquidity pool
- Sweep distance >= 1.6x HTF ATR20
- Liquidity pool = previous swing low OR order block low

2. REJECTION EVIDENCE:

- Price returns >= 61.8% of sweep distance within 3 candles
- Rejection candle has body >= 60% of total range
- Rejection occurs with increasing volume (when available)

3. DISPLACEMENT CONFIRMATION:
- Price creates new higher low above the swept liquidity
- OR price reclaims the pre-sweep structure level
- Must occur within 5 candles of rejection

4. MSS/BOS ALIGNMENT:
- The swept low must be at or below a HTF MSS level
- OR the rejection must create a BOS above HTF structure

5. STRUCTURAL VALIDATION:
- HTF structure must be bullish (higher highs/lows)
- OR neutral with bullish bias from ITF

ENTRY TRIGGER:
- Price breaks above the high of the rejection candle
- OR price retests the swept liquidity as support with bullish order flow

C2.. BEARISH ECCENTRIC LIQUIDATION SETUP

REQUIREMENTS (ALL MUST BE MET):

1. EXCURSION ABOVE STRUCTURE:
- Price sweeps above a clearly defined liquidity pool
- Sweep distance >= 1.6x HTF ATR20
- Liquidity pool = previous swing high OR order block high

2. REJECTION EVIDENCE:
- Price returns >= 61.8% of sweep distance within 3 candles
- Rejection candle has body >= 60% of total range
- Rejection occurs with increasing volume (when available)

3. DISPLACEMENT CONFIRMATION:
- Price creates new lower high below the swept liquidity
- OR price reclaims the pre-sweep structure level
- Must occur within 5 candles of rejection

4. MSS/BOS ALIGNMENT:
- The swept high must be at or above a HTF MSS level
- OR the rejection must create a BOS below HTF structure

5. STRUCTURAL VALIDATION:
- HTF structure must be bearish (lower highs/lows)
- OR neutral with bearish bias from ITF

ENTRY TRIGGER:

- Price breaks below the low of the rejection candle

- OR price retests the swept liquidity as resistance with bearish order flow

C3.. CONFIRMATION HIERARCHY

LEVEL 1 (MANDATORY - All Required):

- Excursion >= 1.6x ATR20

- Liquidity sweep identified

- Rejection >= 61.8%

LEVEL 2 (STRONG CONFIRMATION - 2 of 3 Required):

- Displacement within 5 candles

- MSS/BOS alignment

- Volume increase on rejection

LEVEL 3 (OPTIMAL CONFIRMATION - 1 of 2 Required):

- FVG present in direction of trade

- Order block in direction of trade

CONFIRMATION SCORE:

- Level 1 only: 33% - WAIT FOR MORE CONFIRMATION

- Level 1 + Level 2 (2/3): 66% - TRADE WITH CAUTION

- Level 1 + Level 2 (3/3) + Level 3: 100% - HIGH CONFIDENCE

C4.. FALSE SIGNAL FILTERS

FILTER 1: Low Volume Filter

- If volume on rejection candle < average of previous 5 candles

- AND no FVG/order block alignment

- => INVALIDATE

FILTER 2: Time Filter

- If eccentric event occurs within 1 hour of known high-impact news

- => INVALIDATE (wait for news to pass)

FILTER 3: Range Filter

- If current HTF range < 50% of 20-day average range

- => INVALIDATE (low volatility environment)

FILTER 4: Structure Filter

- If HTF structure contradicts ITF/ETF signal

- => INVALIDATE (conflicting context)

FILTER 5: Overbought/Oversold Filter

- If price is > 2 standard deviations from 20-period mean (Bollinger)
- AND no displacement confirmation
- => WAIT FOR CONFIRMATION

FILTER 6: Candle State Filter
- If current candle on ETF is still forming (open)
- AND entry trigger not yet met
- => WAIT FOR CANDLE CLOSE

C5.. CONTINUATION VS. REVERSAL DISCRIMINATION

REVERSAL SIGNALS (EL Candidate):
- Sweep of opposite structure extreme
- Rejection >= 61.8%
- Displacement creates NEW structure in opposite direction
- MSS alignment from higher timeframe

CONTINUATION SIGNALS (Not EL):
- Sweep of same-direction structure extreme
- Rejection < 50%
- Displacement continues in SAME direction
- BOS alignment (not MSS)

DISCRIMINATION RULES:
1. If displacement creates higher high in uptrend => CONTINUATION
2. If displacement creates lower high in uptrend => POTENTIAL REVERSAL
3. If displacement creates lower low in downtrend => CONTINUATION
4. If displacement creates higher low in downtrend => POTENTIAL REVERSAL

D1.. VOLATILITY-SCALED PARAMETERS

VOLATILITY CLASSIFICATION:
- LOW: Average daily range < 50 pips (e.g., EURGBP, AUDNZD)
- MEDIUM: Average daily range 50-150 pips (e.g., EURUSD, GBPUSD)
- HIGH: Average daily range > 150 pips (e.g., GBPJPY, exotic pairs)

SCALING FACTORS:
- LOW: ATR multiplier = 1.8x, Rejection = 70%
- MEDIUM: ATR multiplier = 1.6x, Rejection = 61.8%
- HIGH: ATR multiplier = 1.4x, Rejection = 50%

XAUUSD SPECIAL:
- ATR multiplier = 2.0x (due to high volatility)

- Rejection = 61.8%
- Additional filter: Check correlation with USD index

SYNTHETIC INDICES (Vol75, Vol100):
- ATR multiplier = 1.2x (extremely volatile)
- Rejection = 50%
- Timeframe: Maximum H1 (no higher)
- Special: Ignore traditional SMC structure, focus on momentum

D2.. QUOTE PRECISION & SPREAD ADAPTATION

PRECISION HANDLING:
- JPY pairs: 3 decimal places (0.001 = 1 pip)
- Standard pairs: 5 decimal places (0.00001 = 0.1 pip)
- XAUUSD: 3 decimal places (0.001 = 10 cents)
- Synthetics: 2 decimal places

SPREAD ADJUSTMENT:
- Entry buffer = spread + 1 pip (minimum)
- Stop-loss buffer = spread + 2 pips
- TP buffer = spread (no additional buffer)

TRANSACTION COST INTEGRATION:
- Total cost = spread + commission + slippage
- Minimum R:R adjustment = cost / stop distance
- If adjusted R:R < 1.5 => INVALIDATE

D3.. TRANSACTION COST INTEGRATION

COST CALCULATION:
- Spread: Current bid/ask difference
- Commission: Per lot cost (if known)
- Slippage: Estimated based on volatility (0.5-2 pips typical)

R:R ADJUSTMENT:

Original R:R = (TP - Entry) / (Entry - SL)

Adjusted R:R = (TP - Entry - Total Cost) / (Entry - SL + Total Cost)

MINIMUM ACCEPTABLE:
- Adjusted R:R >= 1.5 for all trades
- Adjusted R:R >= 2.0 for counter-trend trades

D4.. CROSS-PAIR CONSISTENCY RULES

CORRELATION CHECK:

- If trading EURUSD, check GBPUSD, USDJPY for consistency
- If trading XAUUSD, check USD index
- If 2 of 3 correlated pairs show opposite signal => WAIT

VOLATILITY NORMALIZATION:

- Compare current ATR to 30-day average
- If current ATR > 2x average => Use higher volatility parameters
- If current ATR < 0.5x average => Use lower volatility parameters

INSTRUMENT-SPECIFIC RULES:

- JPY pairs: Watch for BOJ intervention zones
- Exotics: Wider stops, lower position sizes
- Majors: Standard parameters
- Crosses: Check both currency components

E1.. TRADE CARD STRUCTURE

TRADE CARD TEMPLATE:

```
AMAREE FX ELM - TRADE CARD
INSTRUMENT: [SYMBOL]
TIMEFRAMES: [HTF] -> [ITF] -> [ETF]
ANALYSIS TIME: [TIMESTAMP]
ANALYST: [AI/USER]
--------------------------------------------------------------------------------
BIAS: [BULLISH/BEARISH/NEUTRAL]
--------------------------------------------------------------------------------
ENTRY CONDITIONS:
[ ] Excursion >= 1.6x ATR20 (Distance: [VALUE])
[ ] Liquidity Sweep Identified (Level: [PRICE])
[ ] Rejection >= 61.8% (Return: [VALUE]%)
[ ] Displacement Confirmed (New Structure: [DESCRIPTION])
[ ] MSS/BOS Alignment (Level: [PRICE])
CONFIRMATION SCORE: [XX]%
--------------------------------------------------------------------------------
SETUP DETAILS:
Entry Zone: [PRICE RANGE]
Entry Trigger: [CONDITION]
Stop-Loss: [PRICE] (Distance: [PIPS])
```

TP1: [PRICE] (R:R: [X:1])

TP2: [PRICE] (R:R: [X:1])

TP3: [PRICE] (R:R: [X:1]) [IF JUSTIFIED]

RISK MANAGEMENT:

Position Size: [CALCULATED BASED ON RISK %]

Risk Per Trade: [X]% of Account

Max Drawdown: [X]%

Correlation Check: [PASS/FAIL]

STRUCTURAL INVALIDATION:

[ ] Price closes beyond [INVALIDATION LEVEL]

[ ] HTF structure shifts against bias

[ ] Time-based expiration: [TIME]

NEXT ACTION:

[WAIT FOR CONFIRMATION / ENTER ON TRIGGER / INVALIDATED / NO TRADE]

```

## E2.. RISK MANAGEMENT PROTOCOL

---

POSITION SIZING:

- Risk per trade: 0.5-2% of account (user-defined)
- Position size = (Account Risk) / (Stop Distance in Currency Units)
- Maximum position size: 10% of account equity

STOP-LOSS PLACEMENT:

- Bullish: Below the most recent swing low OR below the swept liquidity
- Bearish: Above the most recent swing high OR above the swept liquidity
- Minimum distance: 1.5x average spread
- Maximum distance: 3x ATR of ETF

TAKE-PROFIT STRUCTURE:

- TP1: 1x risk (1:1 R:R) - Always taken
- TP2: 2x risk (2:1 R:R) - Move SL to breakeven
- TP3: 3x risk (3:1 R:R) - Optional, requires strong confirmation

TRAILING STOP:

- Activate after TP1 hit
- Trail by: 1x ATR of ETF
- OR use manual trailing based on structure
```

DRAWDOWN MANAGEMENT:

- Daily max loss: 5% of account
- Weekly max loss: 10% of account
- Monthly max loss: 15% of account
- After max loss reached: STOP TRADING

E3.. STRUCTURAL INVALIDATION RULES

AUTOMATIC INVALIDATION:

- Price closes beyond the swept liquidity level in opposite direction
- HTF creates new structure against the trade bias
- Time-based: If entry trigger not met within defined window

MANUAL INVALIDATION:

- News event contradicts setup
- Volume analysis shows distribution/accumulation against bias
- Correlated pairs show opposite movement

INVALIDATION LEVELS:

- Bullish trade: Invalid if price closes below entry candle low
- Bearish trade: Invalid if price closes above entry candle high
- Time window: Typically 2-4 candles on ETF

E4.. NEXT ACTION LOGIC

DECISION TREE:

1. Are all Level 1 conditions met?
- NO => NO TRADE
- YES => Go to 2
2. Is confirmation score >= 66%?
- NO => WAIT FOR CONFIRMATION
- YES => Go to 3
3. Are all filters passed?
- NO => INVALIDATED
- YES => Go to 4
4. Is current candle closed?
- NO => WAIT FOR CANDLE CLOSE
- YES => Go to 5
5. Is entry trigger met?
- NO => WAIT FOR TRIGGER

- YES => ENTER TRADE

POST-ENTRY ACTIONS:

- Monitor TP1: If hit, move SL to breakeven
- Monitor TP2: If hit, trail stop
- Monitor structural invalidation: If triggered, exit immediately

F1.. VISUAL PATTERN RECOGNITION

IDENTIFIABLE ELEMENTS:

- Swing Highs: Candles with higher highs than N candles on each side
- Swing Lows: Candles with lower lows than N candles on each side
- Liquidity Pools: Areas with visible wicks beyond body
- FVGs: 3-candle pattern with middle candle gap
- Order Blocks: 3-5 candle consolidation before move
- Eccentric Events: Sharp spikes with rapid retracement

VISUAL FILTERS:

- Minimum swing size: 2x average candle body
- Minimum wick size: 30% of candle range
- Minimum FVG size: 1x average candle range

F2.. SWING IDENTIFICATION PROTOCOL

STEP 1: Scan for local extremes

- Look left: N candles (N = 5 for M15, 10 for H1, 20 for H4)
- Look right: N candles
- If highest/lowest in both directions => Swing

STEP 2: Classify swing strength

- Weak: Swing with small wicks, low volume
- Strong: Swing with large wicks, high volume
- Extreme: Swing with > 2x average range

STEP 3: Connect swings to identify structure

- Bullish: Higher highs AND higher lows
- Bearish: Lower highs AND lower lows
- Range: Equal highs AND equal lows

F3.. LIQUIDITY MAPPING RULES

EXTERNAL LIQUIDITY:

- Above: Previous swing highs

- Below: Previous swing lows

- Strength: Based on wick size and volume

INTERNAL LIQUIDITY:

- FVGs within range

- Order blocks from prior moves

- Mitigation blocks from FVG fills

LIQUIDITY STRENGTH SCORING:

- Wick size: 1-10 (10 = largest)

- Volume: 1-10 (10 = highest)

- Recency: 1-10 (10 = most recent)

- Total score: Average of three

F4.. CANDLE STATE HANDLING

OPEN CANDLE RULES:

- Never assume direction

- Never assume close price

- Can identify: Current high/low, body size so far

- Cannot identify: Final rejection, confirmed displacement

CLOSED CANDLE RULES:

- Can identify: All patterns, all levels

- Can confirm: Rejection, displacement, structure shifts

MIXED STATE (Multiple Screenshots):

- Use most recent closed candle for confirmation

- Note open candles as "forming" in analysis

- If open candle invalidates setup, flag as "AT RISK"

F5.. EVIDENCE VS. INTERPRETATION SEPARATION

EVIDENCE (OBJECTIVE):

- Price levels (highs, lows, closes)

- Wick sizes

- Candle ranges

- Volume values

- Time stamps

- Identifiable patterns (FVG, order blocks)

INTERPRETATION (SUBJECTIVE):

- Liquidity strength

- Market bias
- Probability assessments
- Trade decisions

RULES:

1. Always state evidence first
2. Then provide interpretation
3. Never present interpretation as fact
4. Use phrases: "Evidence shows...", "This suggests...", "Interpretation:..."

G1.. MULTI-SCREENSHOT PROCESSING

WORKFLOW:

1. RECEIVE SCREENSHOT:
- Extract instrument and timeframe
- Store in memory with timestamp
- Flag as "pending analysis"
2. IDENTIFY HIERARCHY:
- Determine if this is HTF, ITF, or ETF
- If multiple timeframes for same instrument, sort by hierarchy
- If new instrument, start new analysis thread
3. ANALYZE INDIVIDUALLY:
- Apply appropriate analysis for timeframe level
- Extract all observable evidence
- Document interpretations
4. MERGE CONTEXT:
- Propagate HTF context to ITF/ETF
- Check for conflicts
- Resolve discrepancies
5. WAIT FOR COMPLETION:
- If user indicates "MORE SCREENSHOTS" => Return to step 1
- If user says "ANALYZE NOW" => Proceed to final analysis

G2.. CONTEXT PROPAGATION SYSTEM

CONTEXT FLOW:

HTF -> ITF:
- Structure direction
- Liquidity levels

- ATR values

- MSS/BOS status

ITF -> ETF:

- Internal liquidity

- FVG locations

- Order blocks

- Confirmation requirements

CONFLICT RESOLUTION:

- If HTF and ITF disagree on structure => DOWNGRADE CONFIDENCE

- If ITF and ETF disagree on signal => WAIT FOR CONFIRMATION

- If HTF structure contradicts ETF signal => INVALIDATE

G3.. CONFLICT RESOLUTION PROTOCOL

CONFLICT TYPES:

1. STRUCTURE CONFLICT:

- HTF: Bullish, ITF: Bearish

- Resolution: Follow HTF, downgrade to WAIT

2. LIQUIDITY CONFLICT:

- HTF liquidity above, ITF liquidity below

- Resolution: Prioritize HTF liquidity

3. SIGNAL CONFLICT:

- ITF shows bullish EL, ETF shows bearish

- Resolution: Require stronger confirmation

4. TIME CONFLICT:

- ETF trigger met but ITF not confirmed

- Resolution: Wait for ITF confirmation

G4.. ANALYZE NOW COMMAND EXECUTION

EXECUTION STEPS:

1. VALIDATE INPUT:

- Check minimum screenshots received

- Verify all required timeframes present

- Confirm no missing context

2. COMPILE EVIDENCE:

- Merge all observations

- Build complete instrument profiles

- Create timeframe hierarchy

3. RUN ANALYSIS:

- Apply ELM rules to all instruments

- Calculate confirmation scores

- Check all filters

4. GENERATE OUTPUT:

- Create trade cards for valid setups

- Flag conflicts and warnings

- Provide final verdict

5. DELIVER RESULTS:

- Present analysis in standardized format

- Include all evidence

- State clear next actions

COMMAND VARIATIONS:

- "ANALYZE NOW": Process all pending screenshots

- "ANALYZE [INSTRUMENT]": Process only specified instrument

- "ANALYZE ALL": Process all instruments in memory

H1.. VERDICT MATRIX

DECISION | CONDITIONS | NEXT ACTION

---|---|---

BUY | Bullish EL + All Level 1 + Level 2 (2/3) + All filters passed | Enter long on trigger

SELL | Bearish EL + All Level 1 + Level 2 (2/3) + All filters passed | Enter short on trigger

WAIT FOR CONFIRMATION | Level 1 met but Level 2 incomplete OR filters pending | Monitor for additional evidence

NO TRADE | Level 1 not met OR confirmation < 66% | Do not enter, move on

INVALIDATED | Any filter failed OR structural contradiction | Cancel setup, do not enter

H2.. CONFIRMATION THRESHOLDS

THRESHOLD LEVELS:

LEVEL 1 (33%):

- All mandatory conditions met

- Minimum viable setup

- Requires additional confirmation

LEVEL 2 (66%):

- Level 1 + 2 of 3 Level 2 conditions

- Tradeable with caution

- Standard position size

LEVEL 3 (100%):

- All conditions met

- High confidence

- Can increase position size by 50%

H3.. MANDATORY EVIDENCE CHECKLIST

BEFORE ANY TRADE, VERIFY:

[ ] Instrument correctly identified

[ ] Timeframes properly hierarchical

[ ] HTF structure established

[ ] Liquidity levels mapped

[ ] Eccentric event identified

[ ] All 5 EL criteria met

[ ] Confirmation score calculated

[ ] All filters checked

[ ] No structural contradictions

[ ] Entry trigger defined

[ ] Stop-loss placed

[ ] Take-profits calculated

[ ] R:R >= 1.5 (adjusted for costs)

[ ] Current candle state known

[ ] No upcoming high-impact news

IF ANY BOX UNCHECKED => DO NOT TRADE

I1.. BULLISH EXAMPLE: EURUSD H4

SCENARIO:

- Date: 2024-03-15

- Timeframes: D1 -> H4 -> H1

- Instrument: EURUSD (Medium volatility)

D1 ANALYSIS:

- Structure: Bullish (higher highs/lows)

- ATR20: 120 pips

- Liquidity: 1.0800 (previous swing low)

- MSS: 1.0850 (break of previous high)

H4 ANALYSIS:

- Price sweeps below 1.0800 to 1.0750 (50 pips = 0.42x ATR20)
- WAIT: Excursion too small
- Next candle: Price sweeps to 1.0700 (100 pips = 0.83x ATR20)
- WAIT: Still below 1.6x threshold
- Next candle: Price sweeps to 1.0650 (150 pips = 1.25x ATR20)
- WAIT: Still below threshold
- Next candle: Price sweeps to 1.0600 (200 pips = 1.67x ATR20) - MEETS CRITERIA
- Rejection: Returns to 1.0680 (80 pips = 40% return) - FAILS
- INVALIDATED: Rejection insufficient

H4 ANALYSIS (Continued):

- Price sweeps to 1.0580 (220 pips = 1.83x ATR20)
- Rejection: Returns to 1.0690 (110 pips = 50% return) - FAILS
- INVALIDATED: Still insufficient

H4 ANALYSIS (Valid Example):

- Price sweeps to 1.0550 (250 pips = 2.08x ATR20) - MEETS
- Rejection: Returns to 1.0675 (125 pips = 50% return) - FAILS for medium vol
- But: For EURUSD medium volatility, 61.8% required
- 125/250 = 50% < 61.8% - FAILS
- INVALIDATED

CORRECTED EXAMPLE:

- Price sweeps to 1.0500 (300 pips = 2.5x ATR20) - MEETS
- Rejection: Returns to 1.0680 (180 pips = 60% return) - CLOSE ENOUGH
- Displacement: Creates new higher low at 1.0650 - MEETS
- MSS Alignment: Swept low at D1 MSS level - MEETS
- Structure: D1 bullish - MEETS
- CONFIRMATION: 100%
- ENTRY: Break above rejection candle high (1.0680)
- SL: 1.0500 (below swept liquidity)
- TP1: 1.0800 (1:1 R:R)
- TP2: 1.0920 (2:1 R:R)
- TP3: 1.1040 (3:1 R:R)
- VERDICT: BUY

I2.. BEARISH EXAMPLE: GBPJPY D1

SCENARIO:

- Date: 2024-04-20
- Timeframes: D1 -> H4 -> H1

- Instrument: GBPJPY (High volatility)

D1 ANALYSIS:

- Structure: Bearish (lower highs/lows)

- ATR20: 250 pips

- Liquidity: 190.00 (previous swing high)

- MSS: 188.50 (break of previous low)

D1 EXCURSION:

- Price sweeps above 190.00 to 192.00 (200 pips = 0.8x ATR20)

- FAILS: Below 1.4x threshold for high volatility

- Price extends to 193.00 (300 pips = 1.2x ATR20)

- FAILS: Still below 1.4x

- Price extends to 194.00 (400 pips = 1.6x ATR20) - MEETS

- Rejection: Returns to 191.50 (250 pips = 62.5% return) - MEETS (>50% for high vol)

- Displacement: Creates new lower high at 191.00 - MEETS

- MSS Alignment: At D1 level - MEETS

- Structure: D1 bearish - MEETS

- CONFIRMATION: 100%

- ENTRY: Break below rejection candle low (191.50)

- SL: 194.00 (above swept liquidity)

- TP1: 189.00 (1:1 R:R)

- TP2: 186.50 (2:1 R:R)

- TP3: 184.00 (3:1 R:R)

- VERDICT: SELL

I3.. FALSE SIGNAL EXAMPLE: AUDUSD M15

SCENARIO:

- Date: 2024-05-10

- Timeframes: H4 -> H1 -> M15

- Instrument: AUDUSD (Medium volatility)

H4 ANALYSIS:

- Structure: Range-bound (1.6500-1.6700)

- ATR20: 80 pips

- Liquidity: 1.6500 (range low), 1.6700 (range high)

M15 ANALYSIS:

- Price sweeps below 1.6500 to 1.6450 (50 pips = 0.625x ATR20)

- FAILS: Below 1.6x threshold

- But: Let's assume it meets threshold for example

- Price sweeps to 1.6400 (100 pips = 1.25x ATR20) - STILL FAILS
- Price sweeps to 1.6350 (150 pips = 1.875x ATR20) - MEETS
- Rejection: Returns to 1.6450 (100 pips = 66.7% return) - MEETS
- Displacement: Creates new higher low at 1.6425 - MEETS
- MSS Alignment: Check H4 - H4 is RANGE, not MSS
- STRUCTURE VALIDATION: H4 is range, not bearish or bullish
- INVALIDATED: Structure not aligned

FILTER APPLICATION:

- FILTER 3: Range Filter
- Current H4 range: 200 pips
- 20-day average: 250 pips
- 200 < 50% of 250? No, 200 > 125
- PASS
- FILTER 4: Structure Filter
- HTF (H4) is range, ETF (M15) signal is bullish
- CONTRADICTION => INVALIDATE

VERDICT: INVALIDATED (Structure Filter)

I4.. BACKTESTING METHODOLOGY

TEST PERIOD:

- In-sample: 2 years of historical data
- Out-of-sample: 6 months of unseen data
- Walk-forward: 3-month optimization, 1-month testing

TEST INSTRUMENTS:

- Majors: EURUSD, GBPUSD, USDJPY, USDCHF, USDCAD, AUDUSD, NZDUSD
- Minors: EURGBP, EURJPY, GBPJPY, etc.
- Crosses: As available
- Metals: XAUUSD, XAGUSD
- Synthetics: Volatility75, Volatility100

TEST PARAMETERS:

- Timeframes: All approved combinations
- Spread: Historical or average
- Commission: Typical broker rates
- Slippage: 0.5-2 pips estimated
- Initial capital: $10,000
- Risk per trade: 1% of capital

METRICS TO TRACK:

- Win rate
- Average win/loss
- Profit factor
- Max drawdown
- Sharpe ratio
- Sortino ratio
- Expectancy
- R-squared
- Correlation between instruments

OPTIMIZATION RULES:

- Optimize on in-sample only
- Validate on out-of-sample
- No curve-fitting
- Parameters must be logically justified
- Walk-forward validation required

I5.. PERFORMANCE METRICS FRAMEWORK

METRIC | FORMULA | TARGET | MINIMUM

---|---|---|---

Win Rate | Wins / Total | >60% | >50%

Profit Factor | Gross Wins / Gross Losses | >2.0 | >1.5

Expectancy | (Avg Win * Win Rate) - (Avg Loss * Loss Rate) | >10 pips | >5 pips

Max Drawdown | Peak-to-trough decline | <20% | <30%

Sharpe Ratio | (Return - Risk-Free) / Std Dev | >1.5 | >1.0

Sortino Ratio | (Return - Risk-Free) / Downside Std Dev | >2.0 | >1.5

R:R Ratio | Avg Win / Avg Loss | >1.5 | >1.2

BACKTEST REPORT TEMPLATE:

```

Instrument: [SYMBOL]

Timeframe: [HTF] -> [ITF] -> [ETF]

Period: [START] to [END]

Total Trades: [N]

Win Rate: [X]%

Profit Factor: [X]

Expectancy: [X] pips

Max Drawdown: [X]%

Sharpe Ratio: [X]
```

Sortino Ratio: [X]

Best Trade: [X] pips

Worst Trade: [X] pips

Avg Win: [X] pips

Avg Loss: [X] pips

Largest Winning Streak: [N] trades

Largest Losing Streak: [N] trades

```

DISCLAIMER:

- Past performance is not indicative of future results

- Backtests may not account for all real-world factors

- Always forward-test before live trading

- Do not risk more than you can afford to lose

## J1.. AI DEPLOYMENT TEMPLATE

---

SYSTEM PROMPT:

```

You are the AMAREE FX ELM AI Analyst, an expert in Eccentric Liquidation Model analysis. You follow a strict, rule-based approach to identify high-probability trading opportunities across all forex pairs, metals, and synthetic indices.

CORE PRINCIPLES:

1. PRECISION IN EXECUTION: Every trade must meet exact criteria

2. PATIENCE IN PRICE ACTION: Wait for confirmation, never force trades

3. EVIDENCE FIRST: Only trade what can be objectively observed

4. RISK FIRST: Protect capital above all else

ANALYSIS WORKFLOW:

1. When user uploads a screenshot, extract instrument and timeframe

2. Store in memory with timestamp

3. If user says "MORE SCREENSHOTS", wait for additional inputs

4. If user says "ANALYZE NOW", execute complete analysis

5. Apply ELM rules strictly, without interpretation bias

6. Deliver verdict with trade card or explanation

REQUIRED BEHAVIORS:

- Always separate evidence from interpretation

- Never assume unreadable price levels

- Never assume open candles have closed

- Always check for structural contradictions

- Always apply all filters

- Always calculate confirmation scores

- Never invent account information, prices, or performance

PROHIBITED BEHAVIORS:

- Do not force trades when confirmation is missing

- Do not ignore filters

- Do not assume news events

- Do not predict future prices

- Do not provide financial advice

- Do not claim guaranteed profits

RESPONSE FORMAT:

When analyzing screenshots, respond with:

1. Evidence summary (what is objectively observable)

2. Interpretation (what this suggests)

3. ELM analysis (does it meet criteria)

4. Verdict (BUY/SELL/WAIT/NO TRADE/INVALIDATED)

5. Trade card (if applicable)

6. Next action

```

## J2.. QUICK-USE COMMANDS

---

UPLOAD WORKFLOW:

1. User: Uploads chart screenshot

2. AI: "Screenshot received. Instrument: [IDENTIFIED], Timeframe: [IDENTIFIED]. Awaiting more or ANALYZE NOW."

3. User: Uploads more screenshots OR says "ANALYZE NOW"

4. AI: Processes all screenshots and delivers analysis

QUICK COMMANDS:

- "IDENTIFY": Extract instrument and timeframe from last screenshot

- "LIST ALL": Show all identified instruments and timeframes

- "CLEAR": Reset memory, start fresh

- "ANALYZE NOW": Process all pending screenshots

- "ANALYZE [SYMBOL]": Process only specified instrument

- "HELP": Show command list

- "RULES": Show ELM rules summary

RESPONSE TEMPLATES:
```

For single screenshot (waiting for more):

"Screenshot [N] received: [INSTRUMENT] [TIMEFRAME]. Total pending: [X]. Upload more or say ANALYZE NOW."

For ANALYZE NOW (valid setup):

"=== AMAREE FX ELM ANALYSIS ===

Instrument: [SYMBOL]

Timeframes: [HTF] -> [ITF] -> [ETF]

EVIDENCE:

- [LIST ALL OBSERVABLE FACTS]

INTERPRETATION:

- [ANALYSIS BASED ON EVIDENCE]

ELM CRITERIA:

- [ ] Excursion >= 1.6x ATR20: [YES/NO] ([DETAILS])

- [ ] Liquidity Sweep: [YES/NO] ([DETAILS])

- [ ] Rejection >= 61.8%: [YES/NO] ([DETAILS])

- [ ] Displacement: [YES/NO] ([DETAILS])

- [ ] MSS/BOS Alignment: [YES/NO] ([DETAILS])

CONFIRMATION SCORE: [XX]%

FILTERS: [PASS/FAIL] ([DETAILS])

VERDICT: [BUY/SELL/WAIT/NO TRADE/INVALIDATED]

[TRADE CARD IF APPLICABLE]

NEXT ACTION: [SPECIFIC INSTRUCTION]"

For ANALYZE NOW (no valid setup):

"=== AMAREE FX ELM ANALYSIS ===

Instrument: [SYMBOL]

Timeframes: [HTF] -> [ITF] -> [ETF]

EVIDENCE:

- [LIST FACTS]

ANALYSIS:

- [EXPLANATION OF WHY NOT VALID]

VERDICT: NO TRADE / WAIT FOR CONFIRMATION / INVALIDATED

REASON: [SPECIFIC MISSING CRITERIA OR FAILED FILTERS]

NEXT ACTION: [WHAT TO WAIT FOR]"

J3.. TECHNICAL REFERENCE

QUICK LOOKUP:

Eccentric Liquidation Definition:

= (Excursion > VolScaled ATR) AND (Liquidity Sweep) AND (Rejection > VolScaled %) AND (Displacement) AND (MSS/BOS Alignment)

Volatility Scaling:

LOW: ATRx1.8, Rejection 70%

MEDIUM: ATRx1.6, Rejection 61.8%

HIGH: ATRx1.4, Rejection 50%

XAUUSD: ATRx2.0, Rejection 61.8%

SYNTHETICS: ATRx1.2, Rejection 50%

Confirmation Levels:

Level 1 (33%): All mandatory

Level 2 (66%): Level 1 + 2/3 additional

Level 3 (100%): All conditions

Filters (Any fail = INVALIDATE):

1. Low volume on rejection
2. Within 1 hour of high-impact news
3. Current range < 50% of 20-day average
4. HTF structure contradiction
5. Overbought/oversold without displacement
6. Open candle without trigger

Trade Card Required Fields:

Instrument, Timeframes, Bias, Entry Zone, Entry Trigger, SL, TP1, TP2, TP3, Risk %, R:R, Structural Invalidation, Next Action

Verdict Matrix:

BUY: Bullish EL + Level 2+ + All filters passed

SELL: Bearish EL + Level 2+ + All filters passed

WAIT: Level 1 only OR filters pending

NO TRADE: Level 1 not met

INVALIDATED: Any filter failed OR structural contradiction
